MICROSOFT INTUNE UPDATE

What is available for users covered by SPE E3 Subscriptions?
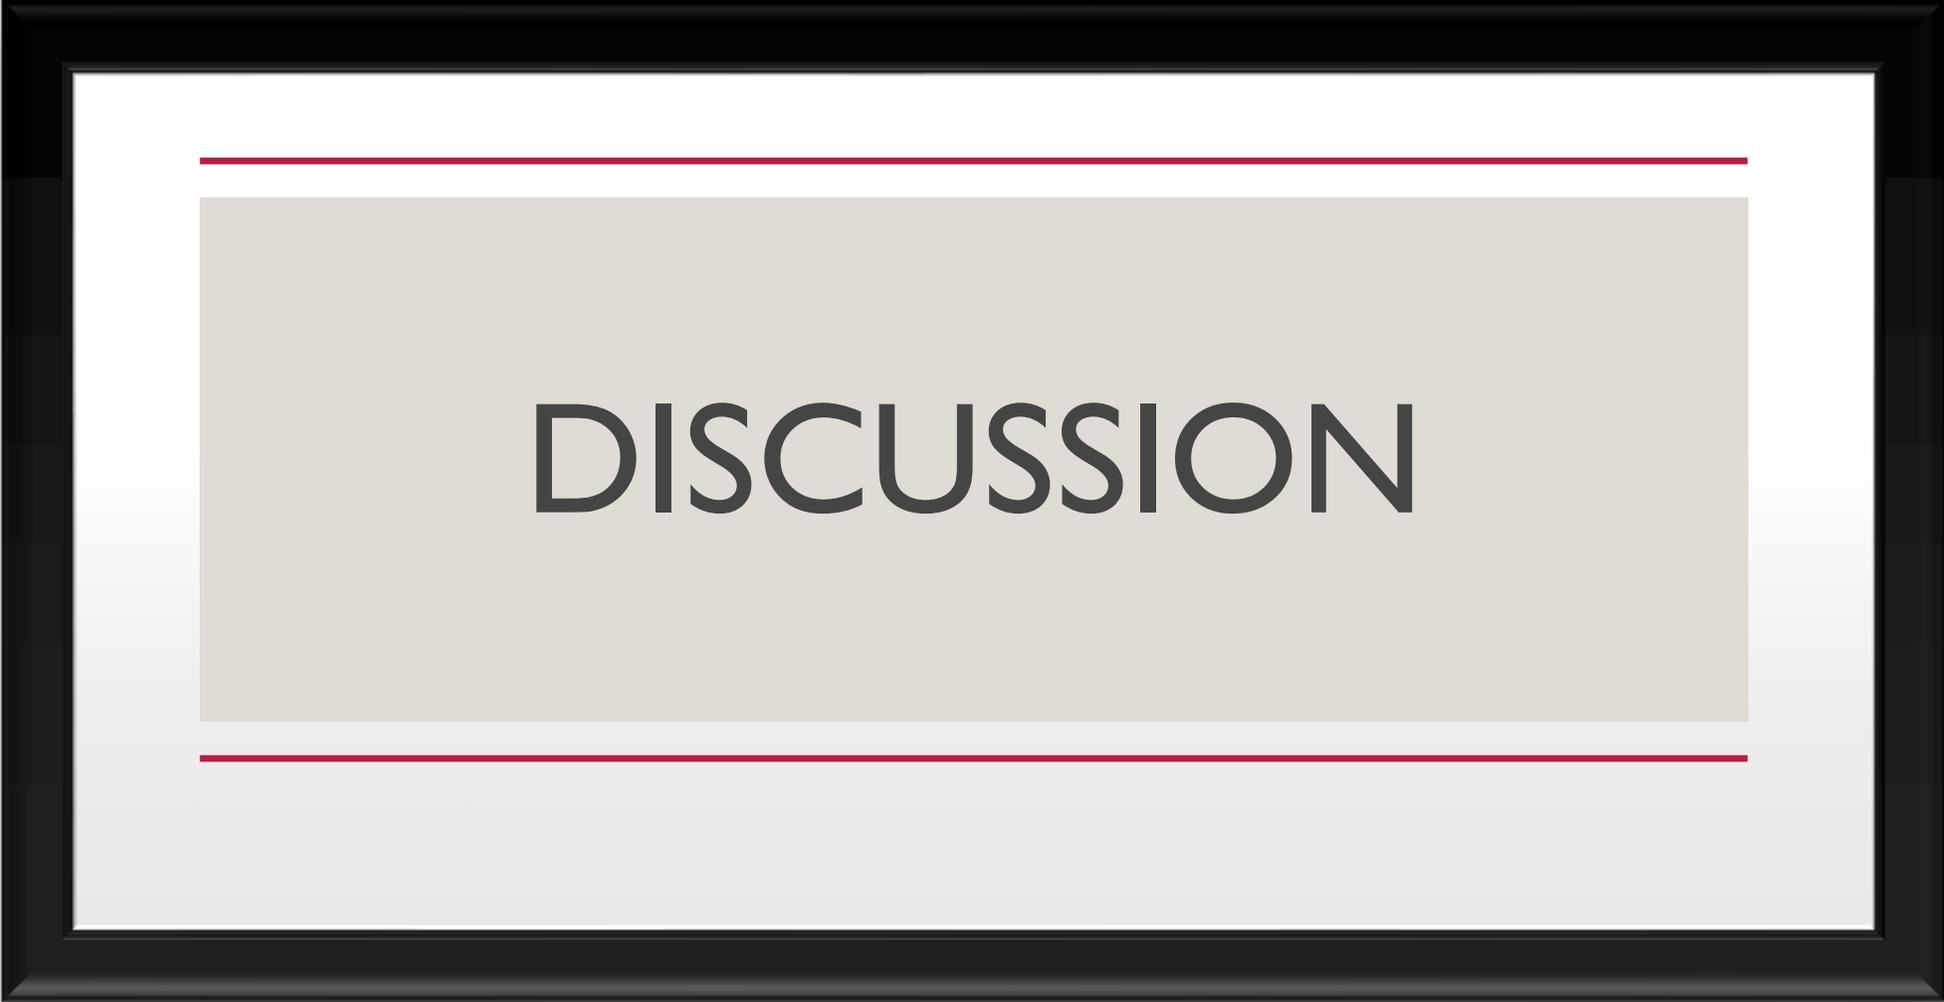

x		Mobile device management for iOS, Android, and Windows devices	x	
x	Intune	Mobile LOB application management using app wrapper	x	
x		Policy-based access management	x	
x		Single management console integration with System Center Configuration	x	

Points of interest

➢ Mobile device management for iOS, Android, and Windows Devices
    The Enterprise Solution for Mobile device management is provided by AirWatch

➢ Policy-based access management (Mobile Application Management -MAM)
    This feature can augment the service provided by AirWatch. For example, users
    can be restricted so they can't transfer documents between commercial One
    Drive and One Drive for Business.

➢ Single management console integration with System Center Configuration (SCCM)
    O365 is not a multi-tenant environment
    Only supports one SCCM platform; agencies would need to migrate to the
    central SCCM platform to take advantage

Possible next steps?

❖ Mobile Application Management Pilot
https://docs.microsoft.com/en-us/intune/mam-faq

❖ Pilot using Intune Web Agent to connect out of band computers to Enterprise on premises SCCM for the purpose of remote management
